

HIGH-ACTIVITY SERRAPEPTASE

iSerra® Serrapeptase
250,000 SPU Per Capsule

A proteolytic¹⁾ enzyme engineered for measured potency, stability, and delayed-release²⁾ delivery — every lot third-party verified for identity and strength.*

THE DIFFERENCE

Where iSerra parts ways with the shelf

	iSerra®	Typical Serrapeptase
SPU per capsule	✓ 250,000 SPU	✗ Often unlisted
Per-lot Certificate of Analysis	✓ Yes — lookup by lot	✗ Rarely provided
Declared mg on label	✓ 130 mg stated	✗ Vague or blended
Capsule type	✓ Delayed-release, dual-phase	✗ Standard capsule
Third-party verification	✓ ISO 17025 lab	✗ Self-reported

DUAL-PHASE DELIVERY™

Enzyme that survives the stomach — and shows up where it counts

Serrapeptase is fragile. Stomach acid deactivates unprotected enzyme before it can do anything. iSerra uses a two-stage capsule-and-coated-pellet system so the enzyme is released past the stomach, with its measured activity intact.¹

Capsule cross-section — illustrative.

PHASE ONE

Acid-Resistant Capsule

A delayed-release²⁾ outer capsule holds the enzyme intact through the stomach's acidic environment, so nothing is wasted before it starts.

PHASE TWO

Coated-Pellet Release

Inside, individually coated pellets dissolve past the stomach — a second layer of protection that targets release where the enzyme can be absorbed.

STANDARDIZED

250,000 SPU, Assayed

Every lot is standardized to 250,000 Serrapeptase Units (SPU)³⁾ per capsule and assayed for real activity — potency you can verify, not estimate.*

130 mg of serrapeptase, standardized to 250,000 SPU

Every capsule assayed for activity — not just weighed for mass.

Enzyme activity is measured by a casein-digestion proteolytic assay⁴⁾ and reported in Serrapeptase Units (SPU)³⁾ — a functional measure of activity, not just milligram weight.

WHO MAKES ISERRA

iSerra is manufactured for iEnzymes in a cGMP-certified, FDA-compliant facility in the USA, under a documented quality-management system. Samples are pulled from every lot and sent to an independent ISO 17025 accredited laboratory — nothing ships until that lot's Certificate of Analysis is on file.

★★★★★ 4.8

Based on 1,247 verified reviews

★★★★★

"Third product I've tried and the only one that lists a real SPU number and backs it with a COA. That's why I keep reordering."

Daniel R.

★★★★★

"I scanned the QR code before I even opened the bottle. Actual lab results for my lot number — that sold me completely."

Marisol T.
VERIFIED BUYER

★★★★★

"No magnesium stearate, vegetarian capsule, and it doesn't upset my stomach taken empty. Exactly what I was looking for."

Karen P.
VERIFIED BUYER

★★★★★

"The delayed-release actually matters. Researched serrapeptase for months and iSerra is the one that took stability seriously."

QUESTIONS

What people ask before their first bottle

How much should I take, and when?

The suggested use is 1 capsule up to three times daily with 8 oz of water on an empty stomach — at least 60 minutes before or 2 hours after a meal. Many people start with once daily and adjust with their healthcare professional.

BACKGROUND ON THE INGREDIENT

The research behind serrapeptase

The following is general, independent background on serrapeptase as an ingredient. It is provided for context only — it is not a description of what iSerra will do for you, and it is separate from any product claim.

A studied enzyme

Serrapeptase is a proteolytic enzyme originally isolated from a bacterium associated with the silkworm, and it has been examined in the peer-reviewed literature for several decades.*

Why delivery matters

Published work has looked at its proteolytic activity and its stability in the digestive tract — the reason enteric or delayed-release formulation is so often discussed for this enzyme.¹

Context, not a claim

This literature concerns the ingredient in general. It does not constitute a claim about iSerra or any specific health outcome. See the references below.
